26th November 2007

Dear David,

We are delighted to be able to provide the following testimonial:

David Fountain's pre-installation meeting was arranged shortly after we contacted him and he was able to answer a number of our queries. His analysis of our site was astute and he did not seem interested in blinding us with science or recommending that we purchase more evacuated tubes than we would need.

He reassured us as to the quality of the products used, explaining their guarantees, but also pointing out that he had not yet needed to use them, because the products have proved so reliable in the past.

We found his pricing very competitive and were impressed by his quiet confidence in the systems.

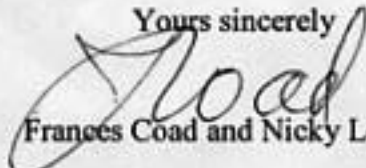

His workmanship was unobtrusive and minimised inconvenience to us. The installation was completed within the time he had suggested and he left us with no mess. He clearly explained to us the use of the system before he left and dealt quickly and efficiently with a small problem we had soon after.

The system seems to work very well. During the weeks following installation, we had some bright late summer weather, during which we did not have to use the back up systems for our water heating that David had connected. On duller days, we find that we run our oil-fired boiler for less time than we used to, because a background level of heat is residual in the tank.

Although it is early days yet, we would recommend Solar Energy Systems to friends – indeed, we already have!

Hope this is of use.

Yours sincerely

Frances Coad and Nicky Losseff
