

We're very pleased with the solar system you installed – it's provided us with plenty of hot water and, so far, we've had to use very little extra power to boost the system. I'd certainly recommend using solar power; the installation's not cheap but we found your charges more competitive than some other firms' and still with good quality workmanship.

As you know, we'd been thinking for some time about having a solar hot water system installed as the front of our house receives a tremendous amount of sunlight throughout the year. But we weren't sure whether the new cylinder we'd need would fit into the space available and whether there'd be a lot of changes to existing pipework.

However, you were prepared to come and see our house, talk about the work involved, suggest solutions to possible problems and answer our questions.

Everything fitted as planned and the work was done quickly and with very little inconvenience. You kept us informed both before and during the installation so we knew what was happening and answered any phone calls/e-mails quickly.

I was particularly pleased that, whilst you were working, you took care not to damage the carpets or décor and that at the end of each day everywhere was left clean and tidy.

Thank you again – we'd certainly recommend you to others.

Mrs Lee, Leeds
