Dear David

**Re: Testimonial – Solar Energy Installations**

I can highly recommend David Fountain of Solar Energy Systems to anyone considering the installation of a solar power system.

At the pre installation meeting the proposed system was fully explained and our questions were comprehensively answered.

We obtained several quotes for the job and David's was very competitive.

The installation was carried out as planned with no inconvenience to ourselves. Any mess was cleared away and the house was left tidy.

When the installation was up and running we could not believe how much very hot water was being generated. We have far more than the family could use. Production is much less in the winter months but the solar warms the water to a level and then the conventional system automatically kicks in to boost the temperature. This provides a significant cost saving.

We had a minor problem post installation which was probably of our own making and David was happy to come and sort it out for us.

If I ever have this type of work carried out in the future I will definitely use David Fountain. I cannot recommend his services more highly.
